(Level 4) [Pass]**

British Computer Society,
2018-2020

**Consensys Blockchain Developer
Bootcamp [Pass]**

Consensys,
2021-2022

WORK EXPERIENCE

UX/UI ENGINEER

Infura (Consensys) | 2022 - 2023

I was a developer responsible for following rebranding designs for the SASS application used by 350,000 users, improving visual consistency and app UX. I offered impactful insights based on technical knowledge and user empathy, which helped resolve frequently conflicting business requirements. Additionally, I maintained application stability during limited QA capacity by writing tests in Playwright, reviewing pull requests on GitHub, and resolving ticketed bugs.

- I led the development of a cross-platform interactive web tour for new users, reducing the barrier to entry for Infura's web application and improving the onboarding experience.
- I created a new user survey integrated into the existing application flow, generating data used to inform future business decisions and drive product improvements.

FRONT-END ENGINEER

Square Enix | 2018 - 2022

I was responsible for creating and deploying for a variety of promotional gaming marketing websites localized for international markets. Was the key developer response for improving the UX and accessibility of the Nier Automata website by collaborating with an accessibility expert, enhancing user inclusivity and implementing legal compliance.

- During a crucial promotional period, the engaging front-end work I delivered generated 14,990 unique web sessions.
- I played an integral role in developing and maintaining legacy and greenfield promotional websites for time-critical marketing campaigns targeting EU and international markets, contributing to ¥25.82 billion in total company sales in 2018.
